INFORMATION DISCLOSURE STATEMENT

Sir:

The present invention relates to a screening and/or synthesis device for carrying out at least one basic operation such as adding, releasing, converting, transferring, detecting, on samples that are contained in reaction vessels of a substance support, especially a titer plate, with at least one receiving device that receives the substance support. The invention further relates to a corresponding method. The invention device is provided with a receiving device that contains a leveling out device that at least partially levels out the substance support before and/or while the basic operation is carried out by subjecting the plate to a pressure and/or attractive force towards a planar area of support. Any bending and/or unevenness that is due to the manufacture of the large-surface titer plate that is preferably used for a simultaneous testing in screening and synthesis systems and that has a multitude of reaction vessels is

compensated or removed across the entire base area or at least in partial areas of the titer plate. The invention device and method improves the functionality, effectiveness and reliability of highly integrated screening and/or synthesis systems since titer plates that are bent due to the manufacture of the plate can be used without problems.

As authorized and encouraged under 37 C.F.R. §1.97-1.99, applicant hereby cites as a means of complying with the duty of disclosure set forth in 37 C.F.R. §1.56, the following patents and/or documents, copies enclosed, which the Examiner should consider with respect to the above-identified United States Patent Application:

U.S. DOCUMENTS		
PATENT/DOCUMENT NO.	DATE	INVENTOR
5,201,348	April 13, 1993	Lurz
5,306,467	April 26, 1994	Douglas-Hamilton et al.
